Business Continuity & Disaster Recovery (BC/DR) Services

Build Resilience to Withstand, Respond, and Recover

Business leaders face constant disruption: cyber incidents, natural disasters, supply chain shocks, and geopolitical instability. Traditional BC/DR programs, often undertested and underfunded, struggle to prove value. Meanwhile, executives are under pressure to demonstrate operational resilience, protect stakeholders, satisfy regulators, and maintain customer trust.

Supported Standards & Frameworks

- ISO 22301 (Business Continuity)
- NIST 800-34 (Contingency Planning)
- FFIEC Business Continuity Handbook
- COBIT
- ITIL Service Continuity
- SOC 2
- Regulatory Guidance (SEC, OCC, FCA, etc.)

FTI Consulting delivers practical, proven BC/DR services that help organizations prepare for disruption, recover faster, and emerge stronger. Leveraging FTI's proprietary BC/DR framework provides a structured approach aligned to global standards (ISO 22301, NIST 800-34, FFIEC) and customized to your business needs.

Effective Resilience in a Complex World

Choosing the right BC/DR strategy requires understanding business impact, recovery priorities, and operational dependencies. Continuity programs are structured to support organizational strategic goals, ensuring that BC/DR initiatives extend beyond regulatory compliance to become integral components of operational resiliency.

FTI Technology partners with organizations to assess vulnerabilities, strengthen governance, validate recovery strategies, and operationalize resilience at every level of the enterprise.

WHY FTI?

Independent Expertise
Objective, consultant-led evaluations across industries and geographies.

Tailored Solutions
Programs aligned to your strategy, not generic templates.

Board-Ready Reporting
Insights that translate continuity into business outcomes.

Cross-Disciplinary Team
Expertise in risk, IT, operations, and compliance.

Proven Framework
Proprietary approach, adaptable across industries and organizations of all sizes.

Our BC/DR Services

Program Assessments

Every strong continuity program begins with a thorough appraisal. Current BC/DR capabilities are evaluated against industry standards, regulatory expectations, and best practices—identifying strengths, gaps, and opportunities for improvement.

Program Governance & Execution

A continuity plan is only as strong as the governance behind it. Clear ownership, defined roles, and escalation procedures are established, embedding resilience into day-to-day operations.

Business Impact Analysis (BIA) & Enterprise Impact Modeling

BIAs are conducted to determine critical processes, interdependencies, and resource requirements. This enables definition of recovery time objectives (RTOs), recovery point objectives (RPOs), and prioritization of critical services.

Continuity & Recovery Planning

Continuity strategies are designed and implemented to span IT, facilities, supply chain, and workforce. Plans are practical, executable, and adaptable to evolving risks.

Operational Recovery & IT Disaster Recovery (DR)

From runbooks to cloud-based recovery strategies, IT recovery capabilities are aligned with business needs. This includes technical recovery, failover design, and system redundancy validation.

Validation & Testing

Tabletop exercises, simulations, and live failover tests are facilitated to validate preparedness. Testing ensures programs withstand real-world pressure and provides actionable lessons learned.

Enhancement & Continuous Improvement

Resilience is an on-going project. Processes for continuous improvement, monitoring evolving threats and regulatory requirements are established, and plans are updated accordingly.

Resilience Integration & Awareness

Resilience is embedded into corporate culture through training, awareness programs, and alignment to enterprise risk management, ensuring readiness extends beyond the plans on paper.

Risk & Compliance Experts with Impact

FTI Technology's Risk & Compliance team has years of combined experience with compliance technology, optimizing processes and programs to meet the demands of regulators and internal stakeholders, and delivering results through implementation and on-going support.

About FTI Technology

FTI Technology solves data-related business challenges, with expertise in compliance, legal, and regulatory matters. As data grows in size and complexity, we help organizations better govern, secure, find, analyze, and rapidly make sense of information. Organizations rely on us to root out fraud, maintain regulatory compliance, protect sensitive materials, quickly find facts and harness organizational data to create business value.
