

Digital Forensics & Investigations

ANALYZING, COLLECTING AND
INVESTIGATING THE FULL SPECTRUM
OF MODERN DATA SOURCES.

EXPERTS WITH IMPACT™

With speed, efficiency and discretion, FTI Technology provides a strategic, systematic, and economic approach to analyzing, collecting and investigating the full spectrum of modern data sources.

Leveraging state-of-the-art forensic technology and methodologies, our experts have years of experience finding and collecting evidence in a defensible manner, with chain of custody intact, minimal disruption to daily business operations and the quickest turnaround times. The FTI Technology team can also provide expert testimony and develop courtroom materials that clearly explain the evidence and methodology.

Forensics & Investigations Services

FTI's digital forensics and collection professionals offer a wide range of global services. With teams, labs and data centers in the US, UK, Australia and Asia, FTI serves clients locally around the world.

Our experts have multiple years of experience handling all types of data including network, mobile device, social media, other cloud-based data and emerging data types such as chat and IM. Along with forensics specialists, we offer licensed private investigators, damages experts, and a full trial services team.

Our service portfolio is extensive and includes the following:

Expert-Led Investigations

FTI Technology's digital forensics group is highly adept at identifying and untangling webs of interdependencies that link people, corporate entities, monetary amounts, business partners and outsiders to the critical events under analysis. This includes the common threats of data theft wiping, or

deletion, as well as identification of unusual activity, such as unexplained gaps in computer usage, Internet browsing history, use of USB /thumb drives, and file access activities. With hundreds of successful collections and investigations completed, the team can deploy anywhere in the world or work remotely to conduct operations with a minimum of disruption to our clients' employees and operations. The team has deep experience handling a variety of data types

and has conducted hundreds of successful investigations including fraud, non-solicit, employee wrongdoing, pre-litigation, regulatory response, corporate due diligence and more.

Intellectual Property Theft & Trade Secret Misappropriation

The FTI team has a particularly strong track record in helping corporations protect against, detect, and contain trade secret and other types of intellectual property theft. We work to identify

risky behavior by departing employees, secure all potentially relevant data sources, recover deleted data, gain access to password-protected files, and find key documents and system artifacts in a minimum amount of time – routinely delivering initial results and reports within 24 hours. Our team can then provide expert testimony about the results of our investigations. The team also works in additional roles around theft investigation, including helping companies that inadvertently receive trade secrets and serving as a neutral third party or court appointed expert to investigate and remediate data theft.

Data Remediation

The FTI Technology team employs thorough and tested workflows to complete both small- and large-scale data remediations. Using an array of data analytics tools, the team can perform a comprehensive identification of problem documents across multiple ESI sources and then quickly remove misappropriated or other unwanted data from company networks.

Social Media, SIM & Chat, and Cloud-Based Data Handling

From apps such as Gmail and Google Docs to collaboration platforms like Slack to chat applications to popular social media sites including LinkedIn, Twitter and Facebook, the FTI Technology team can quickly collect and preserve cloud data in a defensible manner. Using proven software, tools, and methodologies, FTI Technology enables legal and IT teams to easily search, preserve, collect and review these emerging data types alongside other enterprise information so that they can quickly understand and act upon the content for legal matters, investigations or regulatory responses.

Software Licensing, Audit & Piracy Investigations

FTI offers an array of services to help software publishers and other organizations analyze the use and misuse of software licenses. From license audits to software piracy investigations to software asset management, FTI’s global team of recognized experts in digital forensics, licensing compliance and investigations can help corporations monitor and protect these valuable assets.

Electronic Discovery Services

The FTI digital forensics team offers clients deep experience throughout the e-discovery process. From assessment of scope and disposition of data to be acquired, to preservation of relevant electronic evidence, to forensic collection of a full array of data types, to preservation and reconstruction of corrupt or deleted data, the digital forensics team can help. Additionally, the team has worked on email fabrication and alteration matters, testified about authenticity of documents, done deletion analyses from cell phones, email servers and other sources and worked on many other complex e-discovery challenges. Throughout the entire litigation lifecycle—from the earliest stage to presentation at trial—the FTI team employs proven methodologies that provide a strategic and logistical advantage.

Why FTI for Digital Forensics & Investigations

Whether for a time-sensitive investigation or an end-to-end e-discovery matter, the FTI Technology Digital Forensics team delivers:

RAPID RESULTS

In all scenarios, FTI's forensic team acts with the utmost speed and efficiency. We know that in many cases, timing is crucial to the preservation of key facts and data. That's why our professionals work to assess data populations, determine data source types, analyze actions of individuals and preserve evidence rapidly. We then deliver reports on case intelligence within the shortest possible timeline, helping organizations to quickly understand the matter and implement appropriate actions.

GLOBAL SERVICES

As a global company, FTI forensic professionals can quickly deploy from our offices across the world to collect relevant data or uncover key facts behind the investigation. Clients benefit from FTI's extensive experience managing global matters, including adherence to foreign data privacy laws, in-country cultural awareness, discrete processes that do not interrupt the regular course of business and multi-lingual capabilities.

DEFENSIBLE PRACTICES

FTI forensic professionals utilize defensible tools and methodologies to ensure the collection and investigation is conducted in a forensically sound manner. In addition, FTI can develop courtroom materials that clearly explain the forensic evidence and methodology, including affidavits, file activity diagrams, exhibits, as well as expert testimony.

THE FTI TEAM

Trusted Global Leaders in Forensics and Investigations

FTI forensic services are tailored to the specific client needs of each matter. Whether a small internal investigation, or a large global matter that may result in litigation, FTI offers a depth of experience in delivering tangible results for clients. In addition to publishing regular whitepapers, industry articles and books, FTI Forensics and Investigations professionals are actively involved with thought leader groups such as The Sedona Conference, EDRM and the e-Disclosure Information Project.

With more than 4,600 employees located in most major business centers in the world, we work closely with clients every day to anticipate, illuminate, and overcome complex business challenges in areas such as investigations, litigation, mergers and acquisitions, regulatory issues, reputation management and restructuring.

ABOUT FTI TECHNOLOGY

FTI Technology solves data-related business challenges, with expertise in legal and regulatory matters.

As data grows in size and complexity, we help organizations better govern, secure, find, analyze and rapidly make sense of information. Innovative technology, expert services and tenacious problem-solving provide our global clients with defensible and repeatable solutions. Organizations rely on us to root out fraud, maintain regulatory compliance, reduce legal and IT costs, protect sensitive materials, quickly find facts and harness organizational data to create business value.
