

Technology: Remote Data Collections

With speed, efficiency and defensibility, FTI Consulting applies a systematic approach to collecting electronic data across the globe without the need for physical deployment. Using custom and industry-standard tools, our experienced data collection specialists maintain the forensic integrity, defensibility and security of data throughout, supported by full chain of custody tracking.

WHY FTI FOR REMOTE COLLECTIONS

Experienced

The team has performed remote collections for many years, developing robust methodologies to assist clients in a variety of circumstances across the globe, including when our experts are precluded from travel to a particular country or region.

Secure

FTI has established processes and technologies to ensure the security of client data from point of collection through transfer and into FTI platforms, combining strong encryption with high-capacity secure electronic transfer capability.

Defensible

FTI professionals utilize defensible tools and methodologies to ensure collection and investigation is conducted in a forensically sound manner.

Global

With teams and data centers located across the world, FTI can work in any time zone and keep data within our clients' preferred region.

FTI Technology Digital Forensics & Investigations teams around the world have years of experience carrying out remote data collections in scenarios where physical presence at client premises is inefficient or impractical. In the current environment where travel is restricted to and within many countries, FTI can leverage this extensive experience to assist clients, whatever their requirements. We have the agility and expertise to respond promptly with custom solutions and established processes to enable a defensible collection and transfer of data.

Remote Collection Approaches

The FTI team perform remote collections using approaches carefully fitted to our clients' individual needs.

FTI Managed Collection

Working with client, FTI collection specialists can securely access client systems and perform full-service forensic collection remotely, utilizing the local IT infrastructure. This enables the collection of file server, email, structured and many other sources of data. FTI experts can also perform full physical drive imaging, providing full instructions and guidance to our clients, allowing them to easily grant secure access and control to our experts. Collected data can be transferred to FTI by secure direct upload to our servers or by encrypted drive to one of our active intake locations.

FTI Guided Self-Collection

Where clients have an in-house capability to collect data but require additional assurance of data integrity and defensibility, we provide advice and guidance to ensure a sound self-collection approach is taken. This is essential in mitigating the risk of incomplete or corrupt data. The FTI team uses established data intake and validation processes to identify errors such as spoiled metadata and incomplete exports and provides reports of data received so that all parties can be confident the required data has been successfully collected and transferred.

The FTI Team

Trusted Global Leaders in Forensics and Investigations

FTI forensic services are tailored to the specific client needs of each matter. Whether a small internal investigation or a large global matter that may result in litigation, FTI offers a depth of experience in delivering tangible results for clients. In addition to publishing regular whitepapers, industry articles and books, FTI Forensics and Investigations professionals are actively involved with thought leader groups such as The Sedona Conference, EDRM and the e-Disclosure Information Project.

With more than 4,600 employees located in most major business centers in the world, we work closely with clients every day to anticipate, illuminate, and overcome complex business challenges in areas such as investigations, litigation, mergers and acquisitions, regulatory issues, reputation management and restructuring.

About FTI Technology

FTI Technology solves data-related business challenges, with expertise in legal and regulatory matters. As data grows in size and complexity, we help organizations better govern, secure, find, analyze and rapidly make sense of information. Innovative technology, expert services and tenacious problem-solving provide our global clients with defensible and repeatable solutions. Organizations rely on us to root out fraud, maintain regulatory compliance, reduce legal and IT costs, protect sensitive materials, quickly find facts and harness organizational data to create business value.
