

IQ.AI Studio

Leverage a Library of Proprietary GenAI Capabilities

Legal teams are under pressure to use generative AI to accelerate outcomes, but most deployments remain difficult to operationalize at scale. Work product is often created in one-off tools and prompts, outcomes vary by user and matter, and insights are not easily captured or reused. The result is a piecemeal approach in which teams spend time re-creating the same GenAI outputs, struggle to apply the right model and workflow to a specific legal task, and have limited ability to consistently demonstrate accuracy, defensibility and real business value in a complex data environment.

IQ.AI Studio Delivers:

The best models for the right tasks, aligned with organizational governance and policies

An intuitive, flexible wizard approach for client projects

A streamlined process for clients to leverage FTI created tasks or their own library of custom tasks

Built in validation capability to defend processes to courts, regulators and other interested parties

With a focus on customizable and repeatable workflows, FTI Technology has developed IQ.AI Studio, a proprietary library of artificial intelligence tasks and processes, adding an “out of the box” user experience, so that legal teams may supplement their work with specific generative AI-powered self-service tasks.

Currently integrated with both RelativityOne and Relativity Server, IQ.AI Studio provides access to a broad set of proprietary AI capabilities, including 1st pass relevance review, custom classification (e.g. helpful/harmful), summarization, handling complex multimedia (e.g. image and video descriptions, translations, form and handwriting extractions, and audio transcription).

By leveraging IQ.AI Studio, clients are able to streamline workflows using an intuitive, flexible AI solution focused on specific use cases and skills. They can explore multiple hypotheses, angles and complex data in parallel, with a reliable feedback loop between humans and technology.

IQ.AI Studio is part of the broader IQ.AI by FTI Technology suite of AI solutions and can be used across use cases including investigations, review, antitrust, data breach, contracts and more.

Trusted Expertise

The team at FTI Technology leverages deep expertise and broad industry knowledge to provide clients with impactful, tested, logical uses of generative AI. Generative AI is evolving rapidly, requiring built in validation tools and a human in the loop approach. The IQ.AI innovation team of attorneys, case managers, document reviewers and data scientists will continue to evolve in this rapidly changing environment with a model-agnostic and practical approach to balancing accuracy, cost, risk, scale and speed.

Key features in IQ.AI Studio include:

- **Centralized, real-time, AI-powered collaboration** across in-house, law firm and expert advisor teams, enabling enhanced insights and efficiencies through first pass review, privilege review, privilege logging and more.
- **A library of pre-built expert-tested generative AI tasks** developed by a combination of e-discovery data scientists and subject matter experts in antitrust, privacy breach, investigations and other legal and regulatory matters.
- **Functionality to self-create and reuse custom generative AI tasks** for common use cases and workflows, resulting in consistency, substantial data insights and cost savings.
- The ability for corporate legal teams to **reliably apply generative AI in alignment with their internal guidelines** and repeatedly leverage IQ.AI for insights beyond legal and regulatory use cases.
- **Global access to a variety of leading large language models and technologies**, so that clients can flexibly apply the right model for the right problem.
- **Sample generation, validation and prompt refinement capabilities** to enable scalability, flexibility and quality control.
- **Integration with FTI Technology's emerging data sources solutions**, Connect and Universal Messaging Platform, to provide AI-enhanced contextualization, summarization and metadata enrichment of multimedia and disparate messages from cloud applications and collaboration tools.

About FTI Technology

FTI Technology solves data-related business challenges, with expertise in legal and regulatory matters. As data grows in size and complexity, we help organizations better govern, secure, find, analyze and rapidly make sense of information. Innovative technology, expert services and tenacious problem-solving provide our global clients with defensible and repeatable solutions. Organizations rely on us to root out fraud, maintain regulatory compliance, reduce legal and IT costs, protect sensitive materials, quickly find facts and harness organizational data to create business value.
