Ringtail E-Discovery Software Services

Efficient. Practical. Smart. FTI Technology helps clients meet their dynamic legal and regulatory challenges with innovative e-discovery solutions. From leveraging legacy in-house tools for discrete steps within the e-discovery process, to managing the entire process as an outsourced managed service, FTI Technology offers a broad range of flexible solutions that focus not only on the technical tools, but also on the policies and procedures that support the process.

FTI provides hosting and expert managed services for the Ringtail E-Discovery Software, a complete e-discovery solution that combines case management and document review in a single platform. This includes powerful data analytics and visual review tools that dramatically increase the productivity and efficiency of legal review. In total, Ringtail is a powerful e-discovery platform with market-leading functionality designed to dramatically increase reviewer productivity and reduce the overall costs of e-discovery.

FTI Technology's expert Ringtail e-discovery services help your legal team fully optimize the advanced Ringtail features, including:

Visual Early Case Assessment

Ringtail transforms early case assessment from one-dimensional keyword searching and hit counts to multi-dimensional, visual analysis of concepts, custodians and critical data points. In this way, Ringtail delivers far more than just ECA, but also provides the roadmap to quick, cost-effective document review.

Visual Predictive Coding

E-discovery's original visual predictive coding user interface shows key data points on interactive dashboards to improve the speed and consistency of the predictive coding process. Purpose-built to solve the problems of law firms managing a variety of challenging case types, Ringtail makes it easy to use predictive coding.

Data Mining

Perfect during early case assessments, when prioritizing review workflows or when performing quality control (QC), Ringtail's data mining provides a valuable "macro" view into concepts and keywords, ensuring your teams are focusing on the right documents.

OLAP Cubes

Ringtail's OLAP cubes build information-rich pivot tables that allow your team to quickly find important information, from gaps in your collection to how many keyword hits there were across every document in the collection.

Boolean Searching

Ringtail's Boolean search allows teams to build, run, rerun and maintain complex searches during a matter. In addition, searches can be saved and shared with other members of the review team.

Keyword & Search Term Analysis

Ringtail can analyze thousands of search terms and phrases against any-sized custodian population and present interactive "hit-reports" which allow teams to test and sample a variety of search term families without having to run individual searches. These analysis reports are linked to the actual documents, meaning reviewers can go from hit count to document set with a single click.

Search Term Families / Hit Highlighting

Efficiently create, run and automatically update search terms with Ringtail's Search Term refinements. Add multiple search terms at once or bulk upload with spreadsheets to more effectively create Ringtail searches.

Concept Clustering & Searching

Ringtail's innovative Document Mapper clusters documents based on conceptual similarity. Fully searchable and interactive, these Maps allow reviewers to shape, shift, filter and sift documents to reveal key facts and key fact patterns.

Through expert consulting and services, FTI Technology can help corporate legal teams and law firms optimize the Ringtail E-Discovery Software for a greater return on investment. For more information, please visit www.ftitechnology.com.

ABOUT FTI TECHNOLOGY

FTI Technology solves data-related business challenges, with expertise in legal and regulatory matters. As data grows in size and complexity, we help organizations better govern, secure, find, analyze and rapidly make sense of information. Innovative technology, expert services and tenacious problem-solving provide our global clients with defensible and repeatable solutions. Organizations rely on us to root out fraud, maintain regulatory compliance, reduce legal and IT costs, protect sensitive materials, quickly find facts and harness organizational data to create business value.
