

Predictive Coding Enhancements

Ringtail 8.6 features enhancements to Predictive Coding visualizations, reporting, workflows and Continuous Active Learning methodology to increase usability and ease of defensibility.

Enhanced Visualizations

Ringtail’s award winning predictive coding visualizations have been enhanced to make balancing precision and recall as easy as can be. Use the visual sliding scale to determine the appropriate thresholds for your review. New visual color ranges provide a more accurate view to the thresholds of key Predictive Coding variables to streamline review model creation and decision making.

Reporting

Automatically generate predictive coding summary reports to support court defensibility. Clearly communication responsive documents, confidence, precision and recall range to validate review methodology.

Workflow Enhancements

Selecting document populations and samples for your Predictive Coding review has been optimized to more deeply integrate within the natural Ringtail workflow.

Notable enhancements include:

- Populations and samples appear in a collapsible tree grid for improved navigation
- Populations can be created explicitly from binders or saved searches
- Populations can also be used in advanced and quick search

Continuous Active Learning Activation

Applying Continuous Active Learning (CAL) to your Predictive Coding review can now be achieved with just a few clicks of the mouse.

By activating Continuous Active Learning you can:

- Rapidly identify relevant documents earlier in the review process
- Begin the review process prior to receiving complete document sets
- Introduce new documents at any point in time without disrupting the review model

Ringtail Mobile Binders

Today's business world demands that you stay connected, even when on the move or remote. The e-discovery world is no different. However, reviewing case files on the go isn't easy—it requires cutting edge mobile interfaces and advanced security to provide a usable solution. Ringtail Binders meets and exceeds these demands to deliver Ringtail case data into your iPad securely and with ease of navigation.

Ringtail Binders gives you the flexibility to view, search, annotate, and tag key documents from anywhere, at any time, all from the convenience of your iPad.

Using Ringtail Binders you can:

- Easily add binders from your Ringtail desktop environment to be accessed via iPad.
- View document lists and core fields in Ringtail Binders to filter, search and tag important documents.
- Create lists of important documents that can be emailed for sharing and future reference.
- Convert documents to PDF to review, select and zoom in on pages from the thumbnail view.
- Annotate documents with highlights and notes. Show, hide and proof redactions

Rendering Speed Acceleration

Ringtail has always provided users an interface that responds rapidly to user actions, now with rendering speed enhancements; users will experience 3x improvement in doc-to-doc rendering response time. This means load times for pages and native view are accelerated as well as download times and transitions from workspace-to-workspace.
